## Company Overview

EBay is an innovative company in the online industry. They have developed a method of connecting buyers and sellers in a web-based auction format which is fully automated and topically arranged. EBay carries no inventory which enables them to keep their costs low. Their payment service, PayPal, allows anyone with an email account to send or receive payments, no credit cards are necessary. Although eBay's direction is largely driven by their customers, management is taking aggressive and strategic action to guide the company into the future. For nine months ended $9 / 30 / 03$, revenues rose $90 \%$ to $\$ 1.52$ billion, net income rose $87 \%$ to $\$ 304.7$ million.

## Early Stages of Growth

- EBay has tremendous growth potential with expanding oversees markets. EBay motors are a growing portion of domestic sales and are the leading online used car dealer with over 300,000 cars sold in 2002.
- EBay currently has very little competition in the online auction industry. As their company grows so will their name recognition, making it harder for competition to penetrate their markets. People seeking the most value for their items will list them where they will be seen by the most people.
- Great business model. EBay carries no inventory, has very low capital requirements, and produces high profit margins.
- Revenue growth has been at very high levels and should continue to be strong in the future. International revenue up $105 \% \mathrm{y} / \mathrm{y}$ driven by strong German and U.K. growth, domestic revenue up $41 \% \mathrm{y} / \mathrm{y}$.
- Relatively low penetration (5-6\%) of global internet users. 37 million active users in $3^{\text {rd }}$ quarter. Estimated 600+ million global users.

One Year Stock Performance vs. S\&P 500

## Economic Overview

## GDP

GDP is a key driver for nearly every industry. In relation to Internet companies economic growth stimulates PC sales, internet subscriptions, and more disposable income. The Organisation for Economic Cooperation and Development (OECD), which tracks market economies around the world, is projecting GDP to increase as the U.S. comes out of the recent recession. EBay has growing international markets consisting of 29\% of third quarter revenues. The two largest foreign markets are Germany and the U.K, with $59 \%$ and $15 \%$ of third quarter international revenues respectively. ${ }^{1}$ This graph represents GDP growth in the U.S., Germany and the U.K. from 2001 projected through 2004.

Figure: 1

Organisation for Economic Co-operation and Development

The U.S. had a huge 7.2\% third quarter GDP growth, which was boosted by tax refund checks. ${ }^{2}$ That level of growth is not expected to be sustained. However, we still expect significant growth in 2004. Germany's recent stagnating growth is expected to jump in 2004,
while the U.K. has had solid performance since 2001 and is expected to continue. These signs are all good for the major markets of eBay. ${ }^{3}$

## Internet Subscriptions

Penetration of Internet subscriptions in the U.S. is one of the highest in the world. In addition, it is still growing every year. This trend is projected to continue through 2006. We expect U.S. penetration to level off at approximately $90 \%$ in 2010.

Figure: 2

S\&P Industry Surveys: Computers: Consumer Services and the Internet

While it appears that penetration into the U.S. market for Internet users starts to slow considerably from 2004 to 2006, the worldwide market is a different story. Projections from Information Data Corp. show an increasing demand each year through 2006

Figure: 3

S\&P Industry Surveys: Computers: Consumer Services and the Internet

The compound annual growth rate of new Internet users is projected at $14 \%$ from 2001 to 2006. ${ }^{4}$ This is a major reason why eBay will be targeting foreign markets for a large part of their growth. EBay will be there when usage accelerates and will be able to gain name recognition along with millions of international customers.

## PC Sales

While we see a forecasted increase in demand for internet access, not all users currently have the means to get online. To do this, someone needs a personal computer (PC). PCs are the main gateway for individuals to access the Internet. Therefore, PC sales are one of the key drivers in determining if the growth in the Internet is to be expected.

Figure: 4

S\&P Industry Surveys: Computers: Consumer Services and the Internet

As you can see from Figure 4, shipments of new PCs have been relatively stagnate since 2000.
However, projections through 2007 show a considerable increase in expected shipments. ${ }^{5}$ This indicates to us that more people will be wanting access to the Internet and therefore buying personal computers.

## Disposable Income

For an e-commerce company such as eBay, disposable income is an important indicator. Disposable income puts more money in the hands of the consumers. The majority of sales on eBay are not sales of necessities, goods that sustain life; they are luxury goods such as cars, collectibles, entertainment, and jewelry that people buy for fun.

Real disposable income in 2003 is expected to be $\$ 7218$ billion, increasing from $\$ 7032$ in 2002. 2004 is estimated at $\$ 7497$ billion. ${ }^{6}$ Figure 5 shows percentage change in disposable income year to year. Growth is expected to accelerate in 2004, which will place more disposable money in the hands of consumers. This will translate into more purchases of luxury items, which eBay finds most of its users trading.

Figure: 5

www.econ.pncbank.com/neotext.pdf

## Stock Market

The stock market is expected to continue its positive trend through 2004; however, we believe that eBay will continue to outperform the market as it has for the last five years. EBay has performed well in bull and bear markets, partly because during the recession sellers went to eBay to make some extra money, thus fueling its continuous growth.

## Industry Analysis

EBay is commonly classified as a retail company. However, the way in which they go about it is a very young concept: the online auction. EBay sellers list items which buyers place bids on. When a buyer wins an auction, the seller mails the item directly to the buyer. The characteristic of eBay's business model that really sets them apart is that they carry no inventory. To illustrate the impact this can have let us compare eBay to Target, a retailer who carries inventory and with almost identical market cap. As of September 30, 2003 eBay had a trailing twelve-month profit margin of $20.68 \%$, and an operating margin of $27.96 \%$. Target, on the other hand had, a profit margin of 3.64\% and an operating margin of $5.86 \% .^{7}$ This huge difference reveals the advantage of not carrying inventory. EBay also does not have brick and mortar stores which, along with no inventory, greatly reduce capital expenditures.

These reasons tempt us to put eBay into a separate industry classification, which would be Computer Services/Retail. Another company that would fit into this category would be Amazon.com, eBay's closest competitor. Amazon does carry some inventory, but still not as much as a traditional retailer. Amazon's trailing twelve-month profit margin as of September 30, 2003 was $-0.72 \%$, and their operating margin was $4.29 \% .^{8}$ This reveals the superiority of eBay's business model.

Online auctions are currently still in the growth stage of their life cycle. The business cycle reaction is hard to judge at this point due to the continuous growth of this small industry. However, once it enters the mature phase we think it will follow a cyclical pattern
reflecting incomes during both prosperous times and recessions.

## External Factors

Through November of 2003, all interstate sales made on the Internet are not subject to sales tax. A bill has also been introduced in both the Senate and the House of Representatives to permanently extend this law to promote technology growth.

As of May of 2002, the Cyber Security Enhancement Act has been in effect to provide more severe punishment to computer hackers. ${ }^{9}$ For companies that do business exclusively on the Internet, this is beneficial to the security of their sites and the customers who use them. EBay has not had any major incidences yet, but if something happened it could potentially destroy consumer confidence and cripple their business.

These events will help e-commerce evolve into a more mainstream form of purchasing goods. The government is taking a special interest in making sure the Internet is a safe and reliable place to do business.

## Supply Analysis

In this new emerging industry of online auctions, there are very few companies. Other than eBay, Yahoo! is the only company with a significant auction site. Amazon.com, who only has a fixed price format, is also a major competitor. This is somewhat surprising considering the barriers to entry are almost nonexistent, requiring only a minimal amount of software to get started. However, name recognition of the industry leader, eBay, might possibly be enough to deter other auction startups. Depth of users is crucial to receive good market clearing prices. Without a large
amount of prospective buyers viewing items, sellers will not be attracted to list items. Due to the same factor of low start up costs, the industry has an unlimited amount of capacity for growth.

## Demand Analysis

More Internet users means more people are going to hit the auction sites.
Worldwide Internet usage is on a steady increase.

Figure: 6

S\&P Industry Surveys: Computers: Consumer Services and the Internet

The United States is still growing in the number of users, but not nearly at the rate of international users. In Europe deregulation is resulting in more people having affordable access to the Internet. ${ }^{10}$ Europe is one of the major emerging markets in the online auction industry.

## Profitability

Online auctions do not have to deal with taking orders, carrying inventory, have low capital requirements, and have very little profit risk involved. They provide a medium so the buyer and the seller can find each other; for this they charge a small commission on the selling price of the product, or a similar fee. More competition in the industry might bring
the commissions charged into a more competitive price range in the future, but even then high profit margins would remain.

## EBay Company Analysis

EBay was started in September 1995, and its original purpose was to trade Beanie Babies. It has now evolved into the world's largest online auction site and claims to be the most visited site on the Internet. Registered users reacted 86 million in the third quarter, of which 37.4 million are currently active. ${ }^{11}$ Nearly 25\% of all Internet users have found themselves on eBay's site at least once. ${ }^{12}$

Figure: 7

www.eBay.com: Investor Relations
EBay has developed a system where shoppers can browse through millions of items in the inventory, sorted by 35,000 categories. The site is easy to navigate. To find goods, a buyer can either enter the description via search mode, or browse by category titles. A unique trait that eBay capitalizes on is the basic human desire to "win" the auction game, which in turn drives up final selling prices, and eBay's revenues.

EBay uses a system called PayPal for sellers to receive online payments securely and quickly. A traditional credit card is not required to use this site because PayPal can be linked directly to
you bank account. EBay has penetrated several foreign markets and have strong sales in Germany and the U.K. A branch of eBay, eBay Motors, is considered by some to be the largest used car market in the world.

## Strategy

EBay is a very young company in the growth stage of its lifecycle. They are trying to expand their business by acquiring or buying significant shares of online auction sites. The acquisitions of foreign online auction sites are especially needed to drive international expansion.

EBay is still growing rapidly in the U.S. in terms of users. They have been aggressively marketing on T.V., internet, and print. In the past eBay was closed off from search engines. Recently they have allowed search engines to traffic their site to list items listed on eBay. The majority of new eBay users are from people directly typing "eBay.com." ${ }^{13}$ This reaffirms the powerful name recognition mentioned previously. EBay also has significant focus on the international market at this point. Market inefficiencies in scarce, end-of-life, and used/vintage items are large in the international markets, as they once were in the U.S. as internet use and acceptance of e-commerce grow internationally, eBay will be in perfect position, due to their efforts to build a global marketplace, to capitalize on these inefficiencies. ${ }^{14}$

Some major recent acquisitions for eBay have been that of PayPal in October of 2002, and EachNet in July of 2003. On November 16, 2003, eBay made a bid to purchase the remaining $49.9 \%$ of shares it didn't already own in Internet Auction Co. Ltd., the leading Korean auction site. The deal is expected to be
completed by mid December. ${ }^{15}$ Also, in January of 2003 eBay acquired certain assets of CARad.com to expand on its eBay Motors business. ${ }^{16}$

PayPal, the method of payment on eBay, enables anyone with an email account in 38 countries to securely, easily and quickly send and receive payments online. They were acquired to speed up the buying process by eliminating various obstacles presented by traditional payment methods. PayPal makes international sales easier because customers don't have to deal with currency differences. ${ }^{17}$

EachNet, acquired to fuel eBay's global expansion, is the leading e-commerce company in China. EachNet allows their users to buy and sell a wide range of products through both auction format and fixed price. ${ }^{18}$ Seeing as how the Chinese market is huge, and difficult to tap for traditional companies, we see this investment as giving eBay a significant edge over their competition.

## Marketing

EBay benefits from a marketplace with monopolistic characteristics. They have managed to attract a large number of buyers and sellers to their site. The more buyers browsing the site, the more likely a seller will receive top dollar for an item. Early in its development eBay had some competition from other online auction websites. Now eBay, because of the size they have achieved, has very few direct competitors on the same scale. This means that buyers and sellers have very little incentive to look outside of the eBay market. This is what gives it the monopolistic characteristics. ${ }^{19}$

As eBay expands internationally their name recognition will attract customers
to at least browse through the site, if not become active members. Many countries are converting from dial-up to much faster broadband connections. EBay will benefit from this because more people will be conducting transactions online. Currently, foreign revenues consist of $29 \%$ of eBay's total; we expect this to increase substantially as penetration into the international market becomes more complete. ${ }^{20}$

EBay has local sites that serve Australia, Austria, Belgium, Canada, France, Germany, Ireland, Italy, Korea, the Netherlands, New Zealand, Singapore, Spain, Sweden, Switzerland, Taiwan and the United Kingdom. In addition, eBay has a presence in Latin America through its investments in MercadoLibre.com which serves 8 South American countries and EachNet which services China. ${ }^{21}$ A breakdown of fourth quarter to date listings as of October 27 is found in figure 8. EBay tried to enter the Japan market but recently closed all operations there. They were unable to compete with Yahoo! Japan, who has the dominant auction site there.

Listings in Germany and the U.K. have taken off at an incredible rate showing much promise in the international markets. If eBay's other international markets follow that same trend, they will be well on their way to creating the global marketplace they wish to achieve.

EBay is always trying to add features to the site and redesign it to make it more appealing to a broader range of customers. In October, eBay launched an ad campaign directed towards small retailers and wholesalers. Traditionally, eBay users were individual people selling or buying items from home. EBay entered the wholesale market one year ago and is seeing a strong increase
in sales. This campaign is looking for businesses that need to unload various amounts of discounted inventory. ${ }^{22}$

Morgan Stanley Analyst Report Oct. 30, 2003

Activity similar to this has been happening on eBay for a while. More bulk will bring in higher commissions because eBay charges a fee on the final selling price of an item. If that item is a high priced wholesale lot, then it will generate more revenue. To compliment this eBay has implemented new wholesale categories to give the niche markets some structure. One large wholesaler eBay has already attracted is Motorola Inc., who is being used as an example to try and attract more companies. Internet wholesale is still in its infancy and eBay is getting in at the right time. ${ }^{23}$

One of eBay's newly implemented features is the "Buy It Now" option. This is more of a traditional concept where the item has a fixed price that it will sell at. EBay could move into the retail wholesale business more easily using this feature. More than a quarter of the items listed on eBay have this option. This is bringing new business to eBay from companies such as Crest, Sears, and Walt Disney, where they sell brand new items utilizing the "Buy It Now" option. EBay could very well become a global distribution environment for these large companies. ${ }^{24}$

Anything eBay can do to make transactions smoother will result in a higher conversion rate, in other words, more prospective buyers purchasing items. To remove some of the hassle from selling items on eBay, they teamed up with UPS. Previously, after an item was sold, the seller had to switch to an outside website to calculate shipping charges. These charges were sometimes quite surprising to the buyer. Now, UPS has integrated a shipping calculator into PayPal so the buyer of an item can enter their zip code and find out instantly what the shipping costs will be. ${ }^{25}$

EBay Motors is finding huge success in selling used cars and auto parts. Starting in 1998, it has now built a $\$ 5$ billion business where it sold over 300,000 cars in 2002. About half of the sellers are brick-and-mortar dealers who now have a national market online to include in their smaller original geographical area. Part of the success is due to the feedback portion of the sales process. After buyers have purchased an item, in this case a car, they leave feedback on how well the seller cooperated and their honesty.
Insurance, warranty plans, an escrow
service, and shipping and inspection services have also been arranged to help protect the buyer. This has shown to be an excellent domestic growth opportunity that could eventually be expanded to Europe and other regions. ${ }^{26}$ Germany, eBay's most profitable foreign market, has already found success doing this.

The largest part of eBay's revenues come from fees associated with items listed on their website. There is an insertion fee that is charged just for listing an item and is based on the starting price of the item. If the item is listed with a reserve price (minimum selling price), then an additional reserve price auction fee is based on the reserve price, and refunded if the item sells. After an item sells a final valuation fee is charged based on the final selling price. Pictures can also be added to the listing for and additional fee. ${ }^{27}$ Figure 9 on the next page shows a breakdown of the various charges.

Fees for selling vehicles are slightly different. A flat insertion fee is charged for listing the vehicle that is nonrefundable, $\$ 40$ for a passenger vehicle and $\$ 25$ for a motorcycle. This is not based on the starting bid price. A flat $\$ 2.00$ fee is charged for having a reserve price, and a flat $\$ 1.00$ fee is charged for the "Buy It Now" option. Pictures are charged the same as regular items. Finally, when a bid is made, or a bid that meets the reserve is made, a transaction fee is charged which is the same amount as the insertion fee, either $\$ 40$ or $\$ 25$. There is no final valuation fee associated with vehicle sales. ${ }^{28}$

www.eBay.com: help center: fees overview

## Key Risks to eBay

In the current market, eBay has very little direct competition. Yahoo! has a meager auction site; Amazon.com sells used items in non-auction format for set prices. Search engines are another arena
that could infringe on eBay's market share. Fixed prices are becoming important to buyers, and search engines can quickly locate the lowest-priced items on the web. The competition from search engines is not yet significant, but could prove threatening in the future. ${ }^{29}$

EBay is relying on international markets fairly heavily for growth. The U.K. and Germany have worked out very well and continue to provide much growth.
However, if Korea, Italy, Brazil, France, and China don't develop as quickly, this could hurt the valuation of the company. ${ }^{30}$

## Future Prospects and Opportunities

EBay has big plans for expansion throughout the global market. Their name recognition will take them far, discouraging most competition. EBay has a very attractive business model and the potential of enormous growth. Yet, valuing eBay is very difficult because we don't know how fast they will grow or when they will slow down. Also, they face some risks such as: the acquisition of PayPal and how they integrate them into the company, not reaching the high growth rate that investors are expecting, or that online auctions won't catch on in some foreign markets.

## Sensitivity Analysis

The main factors affecting our valuation models are the assumptions of the sales growth rate, continuing value growth rate, and expenses such as cost of revenues, selling and marketing, product development, and general and administrative. EBay's value is mainly derived from their expected growth opportunities.

## Worst Case

Worst case scenario for eBay is that they fail to achieve a continuing value growth rate of $7 \%$. The $7 \%$ growth rate is assumed because growth opportunities will be coming from many different parts of the world. There will always bee room for eBay to expand within each individual market for many years to come. If a strong competitor develops in any of the foreign markets, it could slow their growth rate. Also, if world wide use of the internet doesn't proceed at the predicted rate, then eBay would not have the amount of potential users they expect.

EBay Motors is also a key to domestic growth. If eBay Motors declines as a prominent used car platform this would greatly reduce predicted domestic growth. If eBay's becomes more sensitive to the market due to poor growth rates, this could result in a higher WACC. A combination of increased WACC and a lower continuing value growth rate would result in a price range of \$40-\$48.

EBay could have stronger competition develop. If this happens then their ROIC could be reduced because they would have to compete on price. We are not expecting this because depth of users is the key to attaining good market prices for items. However, with a decreased ROIC and a slower growth rate, eBay would be valued at $\$ 44$ - $\$ 50$.

## Best Case

The best outcome for eBay would arise from total domination of the online auction industry. We see this as a definite possibility. They have a market cap of $\$ 33$ billion and barely any competition in sight. Amazon.com is
struggling and Yahoo! has yet to produce many results with their auction. Search engines could provide some competition. However, EBay has already begun to incorporate search engines into their website by allowing searches to locate items on their site.

As eBay grows their name recognition will also grow. Name recognition is one of their most valuable traits. It will draw larger numbers of sellers who wish to get the highest selling price, and it will draw larger numbers of buyers looking for a wide selection of goods. This domination could smother any potential competition.

If eBay becomes a stable dominate powerhouse with steady revenue coming in year after year, this would reduce the beta implied by the market. If eBay surpasses the growth rate assumptions and their beta is currently higher than it should be, then a price of \$75-\$90 would be appropriate.

EBay's could increase ROIC from having very little competition and developing foreign markets, such as China and South America, into steady performers. In this case, a lower beta would also be appropriate. A price of $\$ 75$ - $\$ 80$ would be implied from higher ROIC and lower beta.

Looking at our current price projections and our sensitivity analysis we see more positive potential than negative potential for eBay. We believe that the foreign expansion will be successful and that the value of eBay will continue to rise.
